SOURCING A PARTNER

AT&G datanet Ltd is a privately owned, independent firm that was founded in 1991. It was found to provide cable installation services to communication business system vendors. Their services are offered to both end-users and contractors; regardless of the demand or budget. They provide complete consultation and install wired and wireless solutions to fit all applications and business sectors, ranging from SMEs to major multi-site organisations.

CLIENT INFORMATION & CHALLENGES

Hotel Celebrity is a prestigious part of the Bournemouth Hotels Group, located in a quiet part of the East Cliff, Bournemouth. This hotel is a little stroll away from the beaches and town centre of Bournemouth. Hotel Celebrity is a fun-filled, vibrant and exciting place with spacious rooms, a restaurant and a bar along with free parking and free WiFi. It also has a Party/ Function room which can easily accommodate a group of 20 to 150 people.

The Challenge

The project required an upgrade of the old Network Video Recorder and replacing it with Eyenor Network Video Recorder. Hotel Celebrity already had numerous installed IP Cameras and the project had the challenging requirement of integrating these cameras into the newly installed Eyenor Network Video Recorder. Another challenge the project posed was ensuring that the existing 8TB hard disks were reused. Also, the front desk needed a user-friendly system that allowed the remote monitoring of the sister hotels.

SOLUTION OF DESIGN & INSTALLATION

Today's hotel guests demand and deserve to be in a safe environment that has a professionally installed quality surveillance system. The Hotel Celebrity chose Eyenor as its brand of choice for an upgrade, based on its ability to provide superior quality Network Video Recorder and Video Management System. We were able to fruitfully realise the client's requirements. The user-friendly interface made the project more efficient as the system was to be used by the reception and night staff.

As with every installation, a thorough project plan was chalked out to take into account the working conditions, environments and special health and safety requirements. This was executed closely with the help of the Hotels' IT Provider and Maintainer to ensure minimal risk to the hotel's IT systems and guest facilities. The Norden specialist support tech team was on standby and able to dial in and remotely configure the system if required. Norden along with our partner, AT&G was able to realise the project needs with Eyenor Network Video Recorder (NVR) and Eyenor Video Management System (VMS).

RESULTS

Norden was able to understand the challenges of the project and offer an exclusive solution. We designed the solution according to the client's brief. Norden was able to provide the right upgrade with our Network Video Recorder along with the Video Management Software which allowed Hotel Celebrity to have a remote viewing on laptops, tablets and phones. Norden was able to satisfy the client's needs and the project was testified as an absolute success.
